

## Bay Window with Casements

Traditionally, Bay windows are made from three windows: a large picture window is flanked by smaller windows on the sides. They are designed to create more interior space by extending the room beyond the interior wall. The exterior of the building has a more distinctive look by the Bay projecting out beyond the exterior wall to provide depth and a focal point.

**Bow Windows** in general offer extended views from a living area within a home. A vinyl bow window uses sweeping curves and tall panes to achieve a sense of grandeur and elegance for any home. The added benefits of installing vinyl bow windows into a home are numerous: low maintenance, strength, superior resistance to outside elements, and energy efficiency.
